

CLOPF®

CLOPF®

The Cost-effective, Long lasting,
Original, Performance Fibre

When added to existing sand CLOPF® will help create more "root structure". This allows the horse to **work more on top** of the surface rather than through it.

We recommend the fibres be added to a fine, washed, industrial sub-angular silica sand. This surface will need to be kept moist to perform at its best.

CLOPF®

The Cost-effective,
Long lasting, Original,
Performance Fibre

**Fed up with a deep, dry
and dusty sand surface?**

Enhance its performance
by adding **CLOPF®**

- Enhances surface stability
- Improves performance
- Adds energy return
- Increases water retention
- Excellent value for money
- Laboratory proven as environmentally sound
